

SABER ADVANTAGES

1 Recessed Hex Nut:
The recessed hex nut provides beautiful clean lines, while at the same time making the valve nearly scratch proof on installation and/or maintenance.

2 Upper Chamber Regulation Screw:
Delany's signature Regulating Screw now with upper chamber regulation ability allows for maximum field adjustability and True-in-the-Field water conservation.

3 Diaphragm with Mashaerator:
Delany's Mashaerator is the market's only self-cleaning bypass. A stainless steel wire loop helps to deflect debris while also preventing hard water build-up in the bypass. Why wait for a filter to clog, when you can keep the bypass open and clean with the Mashaerator. All Delany diaphragms are also made from a chloramine resistant material.

4 Upper Chamber:
The market's smallest upper chamber allows for the most consistent performance across the broadest range of water pressures.

5 SlipFit Joint Connection:
The SlipFit joint connection allows the Saber to fit to any existing Slip Joint Stop in the field.

6 Rubberflex Handle Assembly:
Delany's Rubberflex Handle Assembly provides a leak free seal that lasts and is easy for owners to repair at a fraction of the cost of competitors' handles. It is also both ADA compliant as well as chloramine resistant.

7 Replaceable Main Valve Seat:
The market's only replaceable main valve seat allows for the most cost effective solution in the case of wire drawing or scoring, while also providing the most effective way for a contractor to totally flush the water lines of debris at a job's completion.

8 Vacuum Breaker:
All Delany vacuum breakers are made from a chloramine resistant material.
