# Delany Does it Again!

First we introduced the Saber with the Upper Chamber Regulating Screw to fine tune today's high efficiency toilets, providing "True-in-the-Field" water conservation.

Then came the SmartHandle, the best performing manual dual flush, providing water saving as low as 20 psi.

Now we've taken on the sensor market.

The Pulsar V2.0 with the new SmartChoice Technology makes saving water seamless. It automatically decides if more water is needed. The V2.0 is a sensor-activated dual flush product that, based upon the amount of time the user remains within the range, will determine the flush volume needed.

## Because its a Pulsar...

- It has the simplest self-contained electronics - for easier installation and maintenance
- It uses the industry's longest lasting lithium battery
- It uses a USA-manufactured solenoid that has been tested to 4m operations – meaning it is durable and reliable
- It has software designed to conserve power - resulting in 375K continuous test flushes on a single battery
- It has a set-screw assembly - allowing for installations up to 40% faster than the leading competitor's valve

Because of all these facts, and the Pulsar's proprietary software, the new Pulsar V2.0 will be the most durable, most reliable and easiest to maintain sensor valve on the market, capable of continuous flushing performance for the next half a century.

And Pulsar V2.0 is available in both traditional chrome and Designer Matte Black, perfect for high concept water closets in hotels, clubs and restaurants.

# The *Pulsar* V2.0 Simply the Best!

The St. Louis Arch depends on the Delany Pulsar to service its 3 million annual visitors. They know that it's reliable, easy to service and has the longest lasting battery and solenoid combination available on the market.

Delany is proud to be able to test the new Pulsar V2.0 at this national landmark.

*Changing for the Better - Working to be the Best!*
